

## The Affordable Buildable Certified (ABC) Green Home 3.0 Project by Green Home Builder Magazine Continues to Earn Recognition From Within the U.S. Home Building Industry

We are pleased to announce that The ABC Green Home 3.0, located in Fullerton, CA, has pulled off a hat trick, winning yet another award: ASCE-OC's 2018 Sustainable Engineering Project of the Year.

This most recent award, given February 15, 2018, earns ABC Green Home 3.0 three prestigious awards in a few short months. It joins the NAHB Best in Green Interiors Project Award, awarded January 10th, 2018, on the show floor of the IBS/KBIS in Orlando, FL, and the Best Zero Net Energy Home Design Award, awarded June 29th, 2017, at the PCBC Gold Nugget Awards show in San Diego, CA.

"We appreciate the recognition from our industry colleagues and peers. These awards mean a great deal to the project's design team and suppliers, who put so much of their valuable time, effort and sustainable materials into creating and building the ABC Green Home Project's high-performance American homes," stated Nick Slevin, ABC Green Home Developer and The Publisher of Green Home Builder magazine.

The ABC Green Home Project began in 2011 with the goal of demonstrating best practice in Net-Zero, high performance, American homebuilding, design, technology, and construction to our national home builder readership.

Since its inception, the project has partnered with over 120 building industry consultants, and suppliers, as well as two leading utilities companies

to design, engineer, and construct seven Net-Zero single family residences in Southern California. The eighth home in the project is ABC 4.0, which is now underway in the mountain resort community of Crestline, CA.

The ABC Green Home Project is a sustainable home building brand that strives for excellence on behalf of all

of its participating partners, building industry trades, and members of the U.S. home buying public.

Live web cams are featured on the project website, [abcgreenhome.com](http://abcgreenhome.com), for anyone to watch ABC Green Home 4.0 build out from slab pour to grand opening. Tours of ABC 4.0 will be coordinated upon its completion in 2018 with BIA/SC.
